

## **The structural scheme of the NEAP.**

As a basis structural scheme of the NEAP the classical scheme of problems' illumination and decision is offered:

### **Declarative part.**

#### **B. The NEAP purposes and criteria for its evaluation.**

1. NEAP purposes and tasks.
2. Demands upon the NEAP.
3. Criteria for the results' evaluating of the NEAP realization.

### **Ascertaining part.**

#### **BB. The condition of the environment and problems, which cause its deterioration.**

1. Criteria for the environment, fauna, flora and health of the population condition's evaluating. The general provisions.
2. Soil, water and air condition's review.
3. Fauna, flora and health of the population condition's review.
4. Waste utilizing problem's condition.
5. Use of natural resources.

### **Analytical part.**

#### **BBB. Structure elaboration and primary analysis of the environmental and health of the population data.**

1. Classification of pollution by a degree of danger for the person's health.
2. Classification of pollution's sources by scope of territory and population, which is exposed to influence.
3. Classification by a degree of influence on fauna and flora.
4. Classification of pollution by expenses for pollution's liquidation and prevention.
5. Classification of manufacture by a waste utilizing degree.
6. Contribution of various manufactures and economic activity into the environmental pollution.

#### **BV. Priority problems' definitions and analysis in the environment and health of the population.**

1. Definition of manufactures, which do great harm to the environment and health of the population.
2. Problems, which do not demand significant material resources' attraction.
3. Problems, which decision, can be largely supplied with the inspection bodies' work strengthening.
4. Definition of tasks, which have nation-wide importance.
5. Problems, which demand interstate cooperation.
6. Major factors and criteria in the priority and prime problems' definition.
7. Prime and priority problems of environmental protection and rational use of natural resources.

### **Deciding part.**

#### **V. NEAP realization's mechanisms.**

1. Organizational maintenance of environmental protection and rational use of natural resources.
2. NEAP normative-legal base.
3. Use of economic levers in environmental protection and maintenance of natural resources' rational use.
4. Public and population participation in the ecological problems' decision making.
5. Role of the inspection bodies.
6. National and regional actions plans. Conformity, ratio and elaboration.

#### **VI. Measures on environment restoration and both maintenance of balanced use and natural resources' updating.**

1. Atmosphere.
2. Water resources.
3. Soil resources.
4. Biodiversity. Fauna, flora.
5. Recreation resources.

**VII. Strategy and tactics of economic development without environmental losses.**

In the given unit according to the name of the unit the stages of NEAP realization and basic measures in various areas of industry and kinds of activity are considered.

**VIII. NEAP special programs.**

1. International cooperation.
2. Environmental examination.
3. ...

Further are stated the specific programs' general provisions which detailed are stated in additions.

**Additions.**

**IX. Appendices.**

1. Dictionary of the terms, which are used in NEAP..
  2. Criteria for the environment, fauna, flora and health of the population condition's evaluating. The physics-chemical and biology-medical indexes.
  3. Program of NEAP complete elaboration.
  4. Program of normative-legal base's elaboration and improvement.
  5. Program of scientific support.
  6. Program of monitoring elaboration, data collect and analysis.
  7. Program of ecological education, training, propagation and information.
